1. visual poetry writer

When I walk in the street of NY, I can find many interesting visuals. Sometimes it talks to me with a meaning, and sometimes I can hear some sounds from it. I thought it can be a new type of a poem - visual poetry. So I made a series of visual poetry writer. In this work I didn't use mouse, because to deliver the feeling of writing. You can use tab, arrows and enter(return) key only.

Every day on the way to the school, I saw this graffiti on the escalator of Delancey st. station. It gives me a feeling of poem. With clicking on the screen, you can make your own rhythm.

2. poem writing robot hand

In the first day lightning talk, the story about the poem written by computer was so interesting to me. Suddenly, I imagined the scene a robot writes sorrowful poem with an expressionless face. With a knowledge of electronic circuit I learned here @SFPC, I used nitinol wire to make a soft movement. When a finger moves, a word of poem appears on the screen. This also can be connected to the human hands. I'm making the glove to control the robot hand and the screen at the same time.

3. rock paper scissors game with face

I'm really interested in Rock-Paper-Scissors game. It beats one of the other two, and loses to the other. There is not one ALWAYS WINS. This time, I'm making the face version of Rock-Paper-Scissors game. We have to change our face intensely to make the right sign. Rock-Paper-Scissors game is known as a game of luck. But in this version, we play with an effort.

ROCK = bigger face

SCISSORS = wide lips

PAPER = big open mouth
